

MOBILITY AS A SERVICE

Plan, Book and Ride

Travelers wish to get from door to door as quickly and conveniently as possible. Out of a customer-centric view, MaaS solutions combine all modes of transport in just one app. This way passengers can plan, book and ride with one account.

To provide travelers with such a comfortable solution, more than just a fancy app is needed. Public transport and other mobility service providers work with different data formats and bring various levels of digital maturity to the table. The challenge is to integrate all services in one common platform.

To do so, interfaces between the companies need to be coordinated efficiently. We have developed a modular solution which is capable of a fast and smooth integration: The Sales Platform.

The system allows different levels towards MaaS. Whether you are approaching MaaS step-by-step or all-in right from the beginning, all strategies are supported. Calculating prices for multimodal routes, processing orders/reservations, triggering the settlement of the revenue share for providers or delivering statistics within a comprehensive Backoffice – the Sales Platform has it all covered. While our tools handle the complexity in the background, passengers still get what matters for them: an app to plan, book and ride their journeys with all modes of transport.

PLAN

- » Scheduled and real-time data from all providers are combined to form a joint basis for trip planning
- » Passengers can select mobility services around them, set their travel preferences (favourite modes of transport etc.), sort the results by fast, economic or eco-friendly route and pick the option they prefer

BOOK

The full potential of MaaS can be realized when booking and ticketing are part of the solution. By connecting the Sales Platform to a Payment Service Provider, prepaid and postpaid fares can be processed. Passengers can use the shopping cart function to purchase multiple items with a single payment. They can choose to pay the aggregated amount with credit card, Paypal, Apple Pay, Google Pay etc.

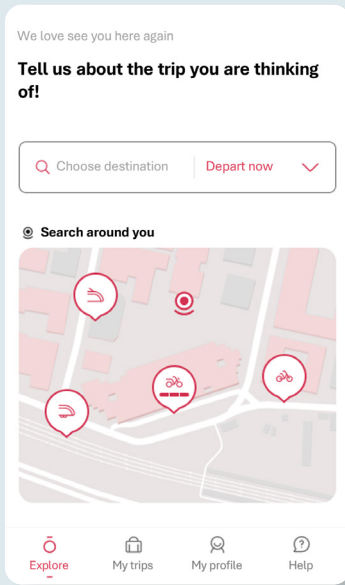

RIDE

Also during their journey travelers are supported in various ways. They can receive live notifications on changes, access all their tickets, keep track of schedules, transfers or connections and rate their travel experience.

MAAS REFERENCES

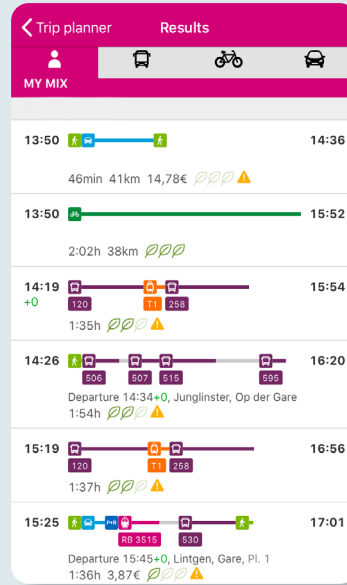

QUESTIONS?
info@hacon.de

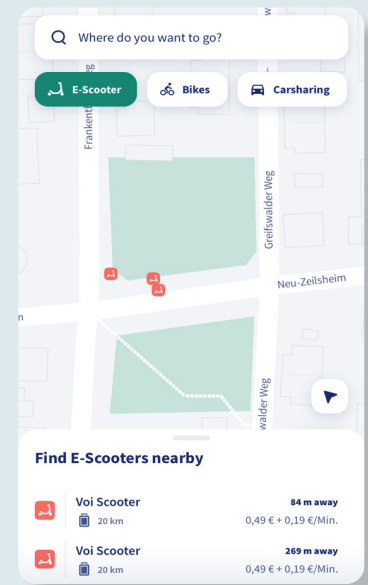

Renfe / Spain

- » MaaS platform for whole Spain with 7 full integrations (plan, book, ride)
- » Over 30 public transport providers on informational level included

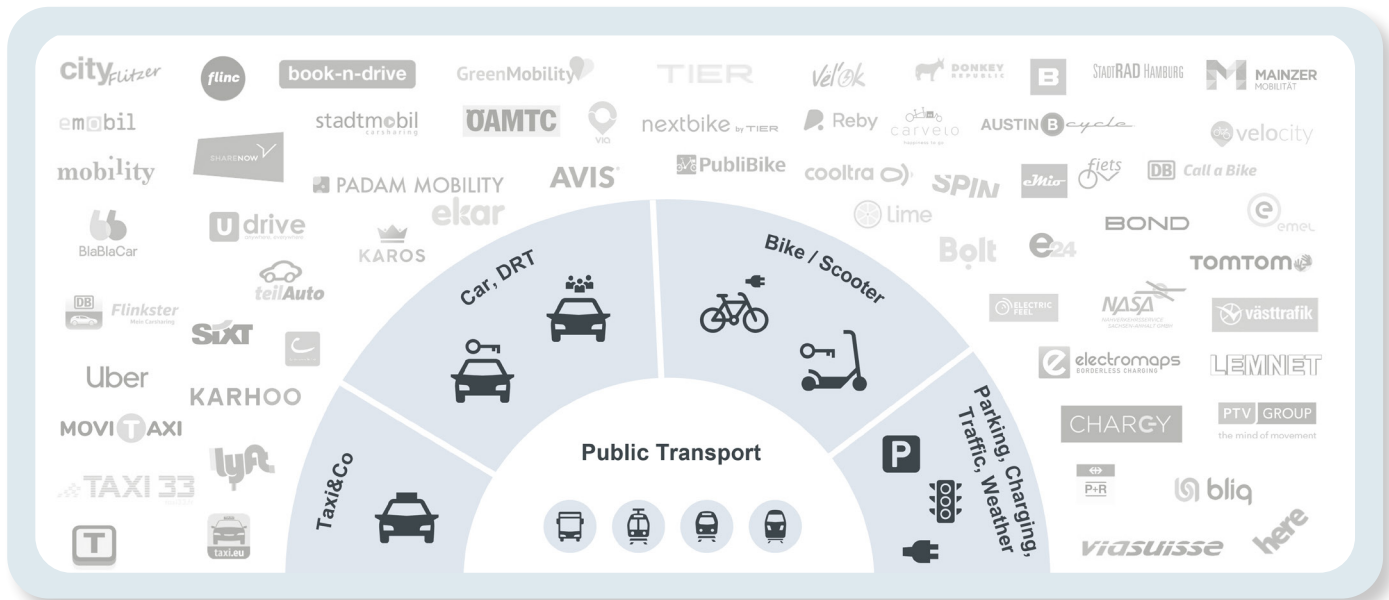

mobilitéit.lu / Luxembourg

- » Intermodal routing (public transport, car, e-charging, car sharing, P&R, bike sharing) and personal travel profile
- » Navigation for car and bicycle routes

RMV / Germany

- » Expandable MaaS solution with journey planner and ticket purchase option
- » Gives more than 2.5 million daily users of RMV easy access to all services

Public transport is the backbone of our MaaS platforms around the world. The overview shows a selection of mobility providers that we have already integrated into our systems.

SIEMENS

HACON

EOS.UPTRADE

BYTEMARK

PADAM MOBILITY

sqills

We make mobility as easy as it gets: For passengers and for transport providers. Our software solutions ensure that passengers get from A to B comfortably and seamlessly – from trip planning, reservations, passenger communication and mobile ticketing to comprehensive MaaS solutions and On-Demand-Services. We support transport providers with fleet, disruption and data management, timetabling and live dispatching tools. We are: Siemens Mobility, Hacon, Sqills, eos.uptrade, Bytemark and Padam Mobility.
